GENERAL INSTRUCTIONS FOR COMPLETING SF 298

The Report Documentation Page (RDP) is used in announcing and cataloging reports. It is important that this information be consistent with the rest of the report, particularly the cover and title page. Instructions for filling in each block of the form follow. It is important to *stay within the lines* to meet optical scanning requirements.

Block 1. Agency Use Only (Leave blank).

Block 2. Report Date. Full publication date including day, month, and year, if available (e.g. 1 Jan 88). Must cite at least the year.

Block 3. Type of Report and Dates Covered. State whether report is interim, final, etc. If applicable, enter inclusive report dates (e.g. 10 Jun 87 - 30 Jun 88).

Block 4. Title and Subtitle. A title is taken from the part of the report that provides the most meaningful and complete information. When a report is prepared in more than one volume, repeat the primary title, add volume number, and include subtitle for the specific volume. On classified documents enter the title classification in parentheses.

Block 5. Funding Numbers. To include contract and grant numbers; may include program element number(s), project number(s), task number(s), and work unit number(s). Use the following labels:

C - Contract	PR - Project
G - Grant	TA - Task
PE - Program Element	WU - Work Unit Accession No.

Block 6. Author(s). Name(s) of person(s) responsible for writing the report, performing the research, or credited with the content of the report. If editor or compiler, this should follow the name(s).

Block 7. Performing Organization Name(s) and Address(es). Self-explanatory.

Block 8. Performing Organization Report Number. Enter the unique alphanumeric report number(s) assigned by the organization performing the report.

Block 9. Sponsoring/Monitoring Agency Name(s) and Address(es). Self-explanatory.

Block 10. Sponsoring/Monitoring Agency Report Number. (If known)

Block 11. Supplementary Notes. Enter information not included elsewhere such as: Prepared in cooperation with...; Trans. of...; To be published in... When a report is revised, include a statement whether the new report supersedes or supplements the older report.

Block 12a. Distribution/Availability Statement. Denotes public availability or limitations. Cite any availability to the public. Enter additional limitations or special markings in all capitals (e.g. NOFORN, REL, ITAR).

DOD - See DoDD 5230.24, "Distribution Statements on Technical Documents."

DOE - See authorities.

NASA - See Handbook NHB 2200.2.

NTIS - Leave blank.

Block 12b. Distribution Code.

DOD - Leave blank.

DOE - Enter DOE distribution categories from the Standard Distribution for Unclassified Scientific and Technical Reports.

NASA - Leave blank.

NTIS - Leave blank.

Block 13. Abstract. Include a brief (*Maximum 200 words*) factual summary of the most significant information contained in the report.

Block 14. Subject Terms. Keywords or phrases identifying major subjects in the report.

Block 15. Number of Pages. Enter the total number of pages.

Block 16. Price Code. Enter appropriate price code (*NTIS only*).

Blocks 17. - 19. Security Classifications. Self-explanatory. Enter U.S. Security Classification in accordance with U.S. Security Regulations (i.e., UNCLASSIFIED). If form contains classified information, stamp classification on the top and bottom of the page.

Block 20. Limitation of Abstract. This block must be completed to assign a limitation to the abstract. Enter either UL (unlimited) or SAR (same as report). An entry in this block is necessary if the abstract is to be limited. If blank, the abstract is assumed to be unlimited.

U.S. ARMY MATERIEL COMMAND

INDUSTRIAL PREPAREDNESS PLANNING LIST (IPPL)

1. **PURPOSE:** The Industrial Preparedness Planning List (IPPL), RCS: DD-DR&E(A) 1201, identifies critical end items and components requiring Industrial Base protection. It is prepared in accordance with Defense Planning Guidance directives to maintain an adequate industrial base capability sufficient to replenish the U.S. forces after a conflict or reconstitute them to pre cold war levels.

2. **BACKGROUND:** This IPPL has been prepared by the Industrial Engineering Activity (IEA) of the U.S. Army Materiel Command (AMC) in accordance with AR 700-90, Army Industrial Preparedness Program and AMC supplemental guidance. Sources that were used in preparation of the FY94 IPPL are the FY93 Department of Army Critical Items List (DA CIL), other services CIL, the FY93 Presidents budget submission, and the War reserves Stockage List (WRSL). IEA coordinated with the planning activities at each of five AMC Major Subordinate Commands (MSC), to compile this list of items essential to the objectives of industrial preparedness planning. This listing has been approved by AMC as having potential for implementation of any industrial base protective measures available for use and as described by law. This listing does not, in and of itself, constitute approval for industrial base investment or specified procurement restrictions. The items contained in this listing and the component breakouts were identified by the following MSCs:

The U.S. Army Armament, Munitions and Chemical Command (AMCCOM), Rock Island, IL

The U.S. Army Aviation and Troop Support Command (ATCOM), St. Louis, MO

The U.S. Army Communications-Electronics Command (CECOM), Ft. Monmouth, NJ

The U.S. Army Missile Command (MICOM), Redstone Arsenal, Huntsville, AL

The U.S. Army Tank-Automotive Command (TACOM), Warren, MI

Any questions regarding the preparation of this report may be addressed by writing the Director, USA Industrial Engineering Activity, Attn: AMXIB-I, Rock Island, IL, 61299-7260 or by phoning Mr. Mike Cadogan at DSN 793-4380. Questions regarding the content of this publication should be addressed to the appropriate command listed above.

3. **ORGANIZATION:** The IPPL consists of two Sections. Section I is a listing of end items that have been identified as critical and are candidates for base restriction efforts. Section I is not

published. Section II is a listing of end items and components that have been identified, through the planning process, as requiring Industrial Base protection efforts for the Section I end items. Section II is published in three parts as follows:

a. Part I is the entry point to the IPPL if the objective is to find a particular end item or component and its nomenclature is known. Specifically, Part I is an index of IPPL item nomenclature to Part II and Part III page numbers; it is a sort of all IPPL items in alphabetical sequence. More than one line of data may appear for an IPPL item if it is to be used on more than one end item.

b. Part II is considered to be the IPPL and lists end items with their supporting components and provides end item visibility for class IX items on the IPPL. Items marked with an asterisk are end items that have not been identified by DA or the MSC as an IPPL item, but which have components that have been so identified.

c. Part III is the entry point to the IPPL if it is necessary to trace an "Item ID Number" back to item nomenclature. Part III is a sort of all IPPL items by Item ID number. When an IPPL end item has more than one Line Item Number (LIN) several lines of nomenclature may appear. An Item ID number for an IPPL component will have one line of nomenclature data followed by one or more lines of end item application data. That is, Part III shows the relationship of a component to its next higher planned assembly and to its end item(s).

4. EXPLANATION OF ENTRIES:

a. The columnar entries of Part I are similar to those defined below for Part II, the IPPL itself, but the Part I entries are arranged in different order across the page. Since Part I is basically an index, page number reference to other parts of the document have been included in place of user, class and IPPL number columns.

b. The columnar entries in Part II follow the format described below:

(1) End Item Control Number: This column displays the ITEM ID numbers assigned to the end items .

(2) RIC: This column identifies the planning activities by Routing Identifier Code (RIC), a code which is commonly used in supply requisitioning. The RICs used in the IPPL are:

AKZ - TACOM
B14 - AMCCOM
B16 - CECOM
B17 - ATCOM (Aviation items)
B64 - MICOM

A-1

(3) ITEM ID number: This data element identifies components as well as end items. The first order of preference when creating Item ID numbers was the NSN. If the NSN was unavailable, the government part number was used, then LIN/DODAC, IPPL ID, MIL SPEC, and SSN. If none of these identifiers were available the contractor part number or other identifier specified by the MSC was used.

(4) LIN/DODAC: This column lists Line Item Numbers (LINs) or DOD Ammunition Codes (DODACs) assigned to the planned items.

(5) USERS: The entries identify the military services that use the planned items and if the items are used by selected allies. The appropriate codes are: "A" for ARMY, "N" for Navy "F" for Airforce, and "M" for Marines.

(6) NOMENCLATURE: This column includes the description as supplied by the MSCs.

(7) CLASS: The meaning of the coded entries in this column are:

1 = The item requires Industrial Base protection and was identified by the Department of Army (DA) or the MSC.

2 = The item requires Industrial Base protection, but is an other service item.

3 = The item has been vertically planned.

9 = The item has been planned for maintenance.

(Note: An entry of "19" represents a combination of codes "1" and "9".)

(8) IPPL NUMBER: This will be the last time the IPPL number is published in the AMC IPPL. The number is a six-character, alpha-numeric identification code unique to particular items in the IPPL. The first two positions relate to the planning activity and duplicate the purpose of the RIC codes. The four (numeric) characters are assigned by the planning activities in accordance with internal coding procedures. This duplicates the function of the ITEM ID number currently assigned in this publication. Therefore, future issues of the AMC IPPL will no longer contain an IPPL number and users will track items by ITEM ID.

c. Part III is basically an index to the IPPL. Two additional columns. "Next Higher Assembly" and "Small Business Set Aside Preference" have been included to relate components to the items on which they are used and to show those items selected for small business set aside.

(1) NEXT HIGHER ASSEMBLY: This column has been included to identify the next higher level of sub-assembly or end item in which

the planned item is used. The numbering system is the same as that used for the Item ID number. If the planned item is an end item, this number will be the same as the Item ID number.

(2) SB PREF: Small Business Set Aside Preference indicates whether the item has been set aside for small business consideration. The codes are: Blank - not applicable, 2 - total set aside, and 3 - partial set aside.

5. Item distribution by Command.

FY 94 IPPL ITEM DISTRIBUTION BY COMMAND

COMMAND	END ITEMS			SECONDARY COMPONENTS			MAINTENANCE	
	CLASS 1	CLASS 2	CLASS 3	CLASS 1	CLASS 2	CLASS 3	CLASS 9	TOTAL
AMCCOM	201	184	0	523	407	0	0	1315
TACOM	89	6	0	55	0	0	0	150
WICOM	9	2	0	160	2	25	0	198

CECOM	126	0	0	42	0	0	0	168
TOTAL	437	192	0	1218	409	25	0	2281

6. AUTOMATED FILES: DOS text files of this publication are available on the IEA LAN, INTERNET address 132.144.240.2. Current planning calls for these files to be updated quarterly. They may be downloaded from the PUBS directory using File Transfer Protocol (FTP). The login for accessing the PUBS directory is ANONYMOUS and the password is GUEST. The text files for IPPL parts I, II, III and this introduction are contained in a self extracting PKZIP file named IPPL.EXE. The files may also be downloaded using a modem and CO-SESSION software at 1-800-331-2802 or with any communications software from the IEA bulletin board at DSN 793-3022. Both the IEA LAN and the bulletin board modems operate at up to 9600 baud and require settings of no parity, 8 data bits and 1 stop bit. Assistance in any of these procedures may be obtained by calling DSN 793-4380 or commercial 309-782-4380.
